### xcodebuild exists but failed to execute

Reported by:	<a href="#">mischaa.rose@...</a>	Owned by:	<a href="#">macports-tickets@...</a>
Priority:	Normal	Milestone:	
Component:	<a href="#">ports</a>	Version:	2.0.4
Keywords:		Cc:	
Port:			

#### Description

In my attempt to install Wine, I've typed:

```
$ sudo port install wine
```

My result is:

```
Warning: xcodebuild exists but failed to execute
Warning: No index(es) found! Have you synced your source indexes?
Error: Port wine not found
To report a bug, see <http://guide.macports.org/#project.tickets>
```

I have tried updating my sources using

```
$ sudo port -v selfupdate
```

and I receive

```
Warning: xcodebuild exists but failed to execute
Warning: No index(es) found! Have you synced your source indexes?
---> Updating MacPorts base sources using rsync
@ERROR: chdir failed
rsync error: error starting client-server protocol (code 5) at /SourceCache/rsync
shell command "/usr/bin/rsync -rtzv --delete-after rsync://rsync.macports.org/re
Error: /opt/local/bin/port: port selfupdate failed: Error synchronizing MacPorts
```

I'm not sure where to go from here. I've checked the FAQ and the Guide, and was unable to find a fix to my problem. Perhaps I was looking at the wrong thing, but any help is greatly appreciated!

Have you agreed to the Xcode license? See [wiki:ProblemHotlist#xcode-eula](#)

Oh, and the rsync error you're seeing is because our rsync server is down. See [#34298](#).

I was unaware that was something I needed to do. I should have read closer!

```
$ xcodebuild -license
```

```
xcode-select: Error: No Xcode folder is set. Run xcode-select -switch <xcode_
Error: /usr/bin/xcode-select returned unexpected error.
```

What I've typed and what I received. I'm unsure where to direct it.

Thank you! I'll give it another try later.

Thank you for responding!

The server is back online now.

Yes, you also need to set the Xcode folder, as shown in [wiki:ProblemHotlist#xcode-select](#)

Thank you! That was it. Working perfectly, now.
